

Medical Mission to Liberia, West Africa

MATE/FCC'S Office in Liberia

Medical Team

To all our friends, prayer partners and supporters. We would like to thank you for partnering with us in the most recent Medical Mission to Liberia, West Africa (March 7 – 29, 2024). The Lord has been most wonderful in putting the right team together (4 from Canada, 3 from the USA and 1 from Guyana). Considering all the satanic hindrances encountered prior to the trip, we can truly say “greater is He that is in us than he that is in the world.” We were very happy with

Team y Meds

Local Volunteers

the local support team the Lord provided in Liberia to work with us (2 doctors, 5 pharmacists, over 20 nurses and the many helpers). We were concerned about getting all the meds to accompany us as we travelled seeing we weren't getting any assistance from the airlines. God worked it out so that the 3 team members from the US were able to travel with 3 suitcases per person of 50 pounds each without having to pay for luggage. That is 150 pounds allocated to each person. Isn't God wonderful?

Our office in Liberia had forewarned us of an expected crowd of about 10,000 persons over the 10 Days of clinics. We had to inform them that it was not possible because we will not have enough meds for such a crowd. The decision was taken to prescreen and pre-register the patients and reduce the number to 4,000. This was done and over the 10 days we attended to over 3,500 patients. The main objective of this medical mission was to address the healthcare needs of underserved communities by offering medical consultations and care, distributing essential medications, conducting health education sessions, and promoting hygienic practices. Also to be able to present the gospel of Jesus Christ at every opportunity. Each day the clinic will start with a devotional with hundreds of patients waiting to be attended to.

Devotion with patients

Dr. Christopher Heywood

Some of the cases we dealt with were common ailments such as malaria, typhoid, pain, diabetes, hypertension, worms, upper respiratory and urinary tract infections. Clients with eye and ear infections were referred. Skin infections were treated. Other clients were treated and referred to local hospital for follow up care were Parkinson Disease, Cardiac issues, gynecological issues. Clients with sickle cell disease were treated for pain and referred for follow up care. Some of the challenges we encountered were shortages of certain medications and medical supplies in providing comprehensive care.

Patients waiting to be attended to

Triage

Patients using PBM Light Therapy

As accustomed, we were using our new therapy, Photo biomodulation light (PBM) to treat several hundred persons with pain and inflammation with successful results. If you are interested you can get information about this therapy on www.sunpowerled.org or call Arnold Doobay.

Each night and on a Sunday morning special meeting were held in a different church.

Dr. Foderingham Preaching

Girannie sharing

These meetings were very successful in seeing many people come and place their faith in Jesus Christ for Salvation. Also, many Christians recommitted their lives to the Lord as a result.

During the weeks of medical clinics, we held optical services where patients had their eyes checked and

Patients waiting for optical service

were given prescribed glasses. This was done with the help of optical services in Liberia. Hundreds of people received glasses.

Youth Rally

On the Saturday in the middle of the trip there was a youth rally with over a thousand young people presenting their dramas, skits, competitions and other presentations. This was an exciting time for the youths of Liberia especially when one of our doctors stole the show with his musical presentation. The team members were involved in judging the various competitions. This is just the beginning of what we believe God has in store for the people of Liberia.

Please pray for Emmanuel Saah who had a rather large tumor on his face and was diagnosed and treated. With the Lord's help funds were raised for the surgery to be done in Liberia. This surgery was successful and Emmanuel is recovering at home. There is still some swelling but we trust God he will be well.

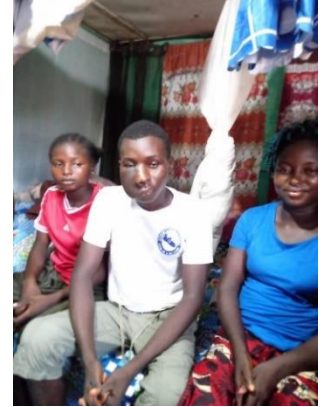

This medical mission to Liberia made significant strides in empowering the communities served to seek out access to healthcare services and raise awareness about preventive health measures. Despite challenges, dedication and collaboration of the team members both local and international, they all contributed to the success of the mission, leaving a positive impact on the communities served. We will continue to Equip and Serve the people of Liberia, and if you are willing to lend a hand in changing a life, we will be happy to hear from you, and remember **"LITTLE IS MUCH WHEN GOD IS IN IT."** You can be God's hand extended to someone desperately **IN NEED**.

Thank you and God Bless you.
